

ACTIVITY NO. 05

COIN COLLECTION

Objectives:

- Add collectible coin objects
- Implement interaction between the character and coins
- Introduce basic game mechanics (collection system)
- Display simple feedback when coins are collected

Instructions: Continue using your project from **Activity No. 04**.

- 1. Add coin objects.** Create or import coin objects into your scene. You may design simple coins using Unity shapes or use free assets.
- 2. Position Coins in the Environment.** Place multiple coins around your scene (on platforms, pathways, or open areas). Make sure they are visible and reachable by the player.
- 3. Implement Coin Collection Behavior.** Set up a system where coins disappear once the player touches them. This simulates collecting the coin.
- 4. Add Score Display.** Display a simple counter that increases every time a coin is collected.
